FOR IMMEDIATE RELEASE

PSI selected to provide network and telecom infrastructure Walmart Super Store Scheduled to open in July.

Chicago, IL – March 11, 2016 –

In June of 2011 professional systems, Inc. (PSI) formally met all requirements to become an approved vendor for Walmart Corporation for data and telecom infrastructure services. This came after a rigorous vetting process to confirm PSI's capacity, capability and experience in the network, data and telecom industry. Since that time PSI has also been vetted and approved to provide integrated security technology with master service agreements for both disciplines. Being awarded one such MSA is would be a great win but entering agreements in both categories is even more impressive.

After successfully completing network and telecom infrastructure projects for multiple stores, PSI has been awarded the contract to provide network infrastructure design and implementation services for the new Walmart Superstore in Richton Park, IL. According to CEO William Burton, "Walmart and PSI have built a great relationship since entering our first agreement to provide services. Being awarded Walmart's flagship Superstore is a testament to the growth of our partnership."

Walmart's data network is the heartbeat of its operation and the standards for the network and telecom vendors is set high. To maintain a maximum quality standard vendors are rated on several criteria to access the quality of their work. PSI has consistently received high ratings and looks forward to continuing to raise the bar.
